Compensation Plans

Binary Matrix

Genealogy tree where each node can have two children and each children can have 2 grand children and goes on. You can set the depth of the tree or have infinite depth. It is the most commonly used genealogy type.

Forced Matrix

Forced Matrix genealogy tree can be configured to have custom width and custom height. This type can be used when you need to taylor the matrix to your needs.
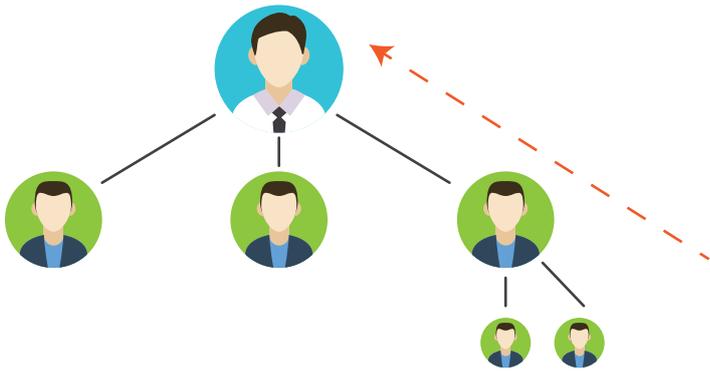

Unilevel Matrix

Unilevel matrix has only a single level depth. A node can have many children. You can refer as many users you want and they are added under you in the tree.

Linear Matrix

Linear matrix node can have only one child and that child can have only one grand child and so on. The width of the tree is always one.

X-up Matrix

The nth child in the tree is promoted up x level. This matrix can provide certain users advantage as they join.
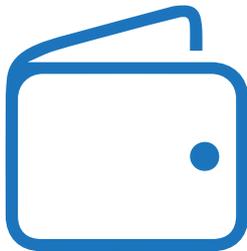

Cycle 1

Cycle 2

Cycle Matrix

Certain n width and m height forms a cycle. Once a cycle gets filled up the next cycle is started. You can set up cycle commission once a cycle is completed or level commission.

Cycle 3
